a train of barges of the NVA/See consisting of a navy tender and a speed boat was observed on position 54025' N / 12008' E at course 2400. The designation of the tender could not be identified.

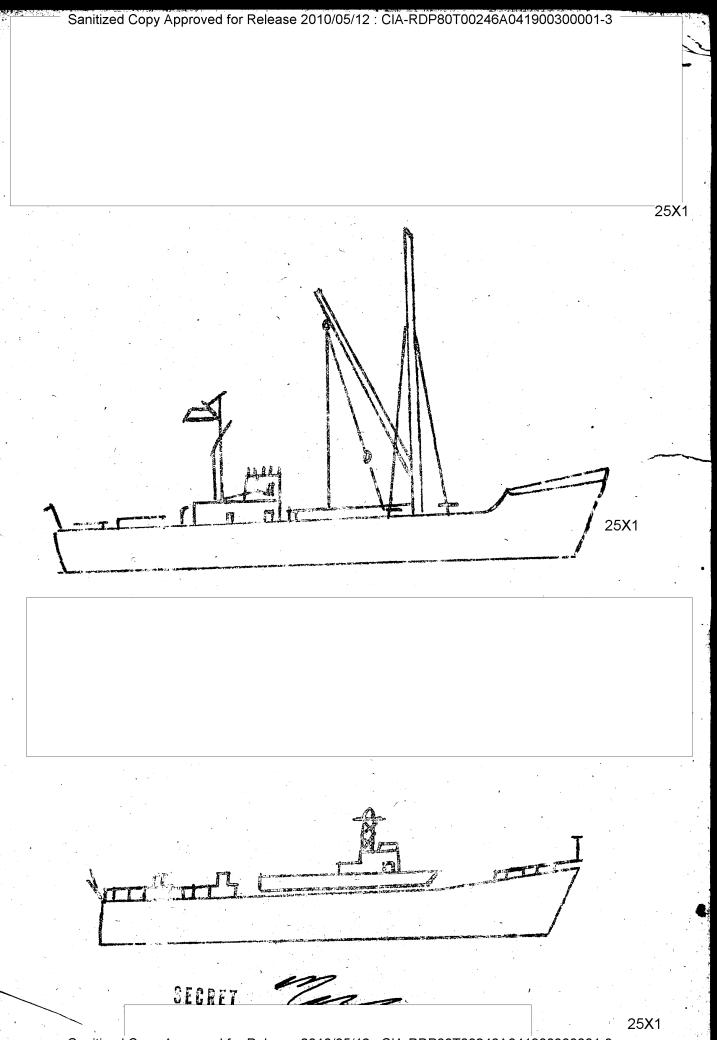

Description of the speedboat: Apparently of Soviet type, radar mast mounted on top of bridge house, short and bulky hull, high-sided, one torpedo tube on either side, approximately in the middle of the ship; Two canvas covered guns on quarter deck; and only a small anchor capstan and a small rail on the forecastle. (See sketch).

25X1

Comment. The "tender" is believed to be a lighter for . dry cargo of NYA/See.

The tugged speedboat presumably is one of the mine vessels of type P-6 turned over to the NVA by the Soviets. The observation in this area is considered normal, (about 6 seamiles south-west of Gedser Rev).

For sketches, see Annex.
